UNIT THREE PROBLEM SET

Score:

Do not cheat by copying the work of another person, or by allowing another person to copy your answers. Cheating results in a 0% grade for both parties involved.

Signature______________________________ Date_________

In the event any or all of this Problem Set is assessed for a grade, it must be signed and dated in order to receive a grade. The work shall be your own.

Problem Sets are generally not accepted late. Late assignments are 50% off.
Chapter 6 Worksheet 6 Writing Ternary Ionic Formulas from Names

Use the criss-cross method to fill in the table with the correct compound

<table>

$Ca_3(PO_4)_2$

Polyatomic Formulas: OH⁻, SO₄²⁻, NO₃⁻, PO₄³⁻, CO₃²⁻, HCO₃⁻, CH₃CO₂⁻ and NH₄⁺

Write the formula for the following compounds (not all use polyatomic ions)

1. Sodium hydroxide
2. Calcium hydrogen carbonate
3. Copper(II) nitrate
4. Ammonium sulfide
5. Nickel(II) hydroxide
6. Lithium phosphate
7. Lead(IV) carbonate
8. Potassium sulfate
9. Cobalt(II) acetate
10. Ammonium sulfate
11. Aluminum carbonate
12. Sodium phosphate
13. Magnesium carbonate
14. Iron(III) nitrate
15. Silver acetate
16. Potassium hydrogen carbonate
17. Chromium(VI) sulfate
18. Zinc hydroxide
Chapter 6 Worksheet 7 Naming Ternary Ionic Compounds

Polyatomic Formulas: OH\(^{-}\), SO\(_4\)^{2-}, NO\(_3\)^{-}, PO\(_4\)^{3-}, CO\(_3\)^{2-}, HCO\(_3\)^{-}, CH\(_3\)CO\(_2\)^{-} and NH\(_4\)^{+}

Write the Name

1. ______________________________________________________________ AlPO\(_4\)
2. ______________________________________________________________ K\(_2\)SO\(_4\)
3. ______________________________________________________________ Be(NO\(_3\))\(_2\)
4. ______________________________________________________________ (NH\(_4\))\(_2\)O
5. ______________________________________________________________ NaHCO\(_3\)
6. ______________________________________________________________ Ni(OH)\(_2\)
7. ______________________________________________________________ Ti(SO\(_4\))\(_2\)
8. ______________________________________________________________ Mn(CH\(_3\)CO\(_2\))\(_2\)
9. ______________________________________________________________ Li\(_2\)CO\(_3\)
10. _____________________________________________________________ Fe(OH)\(_3\)
11. ______________________________________________________________ SnCO\(_3\)
12. ______________________________________________________________ Cr(PO\(_4\))\(_2\)
13. ______________________________________________________________ AgNO\(_3\)
14. ______________________________________________________________ Sn\(_3\)(PO\(_4\))\(_4\)
15. ______________________________________________________________ Mg(HCO\(_3\))\(_2\)
16. ______________________________________________________________ (NH\(_4\))\(_2\)SO\(_4\)
17. ______________________________________________________________ ZnSO\(_4\)
18. ______________________________________________________________ NH\(_3\)OH
19. ______________________________________________________________ Pb(C\(_2\)H\(_3\)O\(_2\))\(_2\)
20. ______________________________________________________________ AgHCO\(_3\)
21. ______________________________________________________________ Cu\(_2\)(CO\(_3\))\(_3\)
Decide if the compound is ionic or molecular and then answer accordingly.

**Write the Formula**

1. Lithium sulfate
2. Dinitrogen tetroxide
3. Iron(II) sulfide
4. Sodium hydrogen carbonate
5. Sulfur trioxide
6. Calcium phosphate
7. Magnesium nitride
8. Potassium acetate
9. Copper(II) hydroxide

**Write the Name**

10. (NH₄)₂S
11. Al(NO₃)₃
12. NiBr₂
13. SiO₂
14. Pb(OH)₂
15. NF₃
16. Co(CH₃CO₂)₂
17. CrPO₄
18. K₂CO₃
Chapter 7 Worksheet 7: Percent Composition

Determine the percentage composition of each of the compounds below:

Example: What is the percent silver in AgNO₃?
Step 1: Determine the molar mass
\[
\begin{align*}
\text{Ag} &= 107.9 \times 1 = 107.87 \\
\text{N} &= 14.01 \times 1 = 14.01 \\
\text{O} &= 16.00 \times 3 = 48.00 \\
&= 169.88 \text{ g}
\end{align*}
\]
Step 2: Divide the mass of silver by the molar mass and convert to percent
\[
\frac{107.86}{169.88} = 63.5\%
\]

1. NaCl
   \[
   \begin{align*}
   \text{Na} &= \quad \% \\
   \text{Cl} &= \quad \%
   \end{align*}
   \]

2. CaCO₃
   \[
   \begin{align*}
   \text{Ca} &= \quad \% \\
   \text{C} &= \quad \% \\
   \text{O} &= \quad \%
   \end{align*}
   \]

3. Zn(ClO₃)₂
   \[
   \begin{align*}
   \text{Zn} &= \quad \% \\
   \text{Cl} &= \quad \% \\
   \text{O} &= \quad %
   \end{align*}
   \]

4. (NH₄)₂SO₄
   \[
   \begin{align*}
   \text{N} &= \quad \% \\
   \text{H} &= \quad \% \\
   \text{S} &= \quad \% \\
   \text{O} &= \quad %
   \end{align*}
   \]

5. Fe₂(SO₄)₃
   \[
   \begin{align*}
   \text{Fe} &= \quad \% \\
   \text{S} &= \quad \% \\
   \text{O} &= \quad %
   \end{align*}
   \]

Answers to front: 1: 39.3% Na & 60.7% Cl 2: 40.0% Ca & 12.0% C & 48% O, 3: 28.2% Zn and 30.5% Cl & 41.3% O, 4: 21.2% N & 6.1% H & 24.3% S & 48.8% O, 5: 31.7% Fe & 27.3% S & 41% O
Chapter 7 Worksheet 8: More Percent Composition.

Determine the formula of the compound from the name. Then determine the percent composition.

1. What is the percent chromium in Chromium(III) hydroxide? (Ans = 50.5%)

2. What is the percent oxygen in potassium sulfate? (Ans = 36.7%)

3. Find the percent nitrogen in ammonium oxide? (Ans = 53.8%)

4. What is the percent oxygen in calcium carbonate? (Ans = 48.0%)

5. Determine the percent sodium in sodium phosphate? (Ans = 42.1%)

6. What is the percent iron in iron(III) nitrate? (Ans = 23.1%)
Ch 8 WS 7: Balancing Reactions with Polyatomics

If polyatomics are the same on both sides of the equation, they may be counted as a unit. Your instructor will demonstrate with the first few problems.

*Balance the equations below:*

1.  
   \[ \text{____ AgNO}_3 + \text{____ K}_3\text{PO}_4 \rightarrow \text{____ Ag}_3\text{PO}_4 + \text{____ KNO}_3 \]

2.  
   \[ \text{____ Pb(OH)}_2 + \text{____ HCl} \rightarrow \text{____ H}_2\text{O} + \text{____ PbCl}_2 \]

3.  
   \[ \text{____ AlBr}_3 + \text{____ K}_2\text{SO}_4 \rightarrow \text{____ KBr} + \text{____ Al}_2(\text{SO}_4)_3 \]

4.  
   \[ \text{____ FeCl}_3 + \text{____ NaOH} \rightarrow \text{____ Fe(OH)}_3 + \text{____ NaCl} \]

5.  
   \[ \text{____ Na} + \text{____ H}_2\text{O} \rightarrow \text{____ NaOH} + \text{____ H}_2 \]

6.  
   \[ \text{____ H}_2\text{SO}_4 + \text{____ Ba(NO}_3)_2 \rightarrow \text{____ HNO}_3 + \text{____ BaSO}_4 \]

7.  
   \[ \text{____ Ni(CH}_3\text{CO}_2)_2 + \text{____ K}_2\text{S} \rightarrow \text{____ NiS} + \text{____ KCH}_3\text{CO}_2 \]

8.  
   \[ \text{____ Na}_2\text{CO}_3 + \text{____ FeCl}_3 \rightarrow \text{____ Fe}_2(\text{CO}_3)_3 + \text{____ NaCl} \]

9.  
   \[ \text{____ AgNO}_3 + \text{____ Cu} \rightarrow \text{____ Ag} + \text{____ Cu(NO}_3)_2 \]
Chapter 8 WS 8: Identifying Reaction Types

For the following reactions, indicate whether the following are examples of synthesis, decomposition, combustion, single displacement, or double displacement reactions:

1) \( \text{Na}_3\text{PO}_4 + 3 \text{KOH} \rightarrow 3 \text{NaOH} + \text{K}_3\text{PO}_4 \) __________________________

2) \( \text{MgCl}_2 + \text{Li}_2\text{CO}_3 \rightarrow \text{MgCO}_3 + 2 \text{LiCl} \) __________________________

3) \( \text{C}_6\text{H}_{12} + 9 \text{O}_2 \rightarrow 6 \text{CO}_2 + 6 \text{H}_2\text{O} \) __________________________

4) \( \text{Pb} + \text{FeSO}_4 \rightarrow \text{PbSO}_4 + \text{Fe} \) __________________________

5) \( \text{CaCO}_3 \rightarrow \text{CaO} + \text{CO}_2 \) __________________________

6) \( \text{P}_4 + 3 \text{O}_2 \rightarrow 2 \text{P}_2\text{O}_3 \) __________________________

7) \( 2 \text{RbNO}_3 + \text{BeF}_2 \rightarrow \text{Be(NO}_3)_2 + 2 \text{RbF} \) __________________________

8) \( 2 \text{AgNO}_3 + \text{Cu} \rightarrow \text{Cu(NO}_3)_2 + 2 \text{Ag} \) __________________________

9) \( \text{C}_3\text{H}_6\text{O} + 4 \text{O}_2 \rightarrow 3 \text{CO}_2 + 3 \text{H}_2\text{O} \) __________________________

10) \( 2 \text{C}_5\text{H}_5 + \text{Fe} \rightarrow \text{Fe(C}_5\text{H}_5)_2 \) __________________________

11) \( \text{SeCl}_6 + \text{O}_2 \rightarrow \text{SeO}_2 + 3\text{Cl}_2 \) __________________________

12) \( 2 \text{Mgl}_2 + \text{Mn(SO}_3)_2 \rightarrow 2 \text{MgSO}_3 + \text{MnI}_4 \) __________________________

13) \( \text{O}_3 \rightarrow \text{O}^- + \text{O}_2 \) __________________________

14) \( 2 \text{NO}_2 \rightarrow 2 \text{O}_2 + \text{N}_2 \) __________________________
Predict the products of the following reactions. Do not worry about balancing.

1. Al + CuSO$_4$ → Al$_2$(SO$_4$)$_3$ + Cu
   Type: ___________________________

2. NaI + CaCl$_2$ → NaCl + CaI$_2$
   Type: ___________________________

3. F$_2$ + NaBr → NaF + Br$_2$
   Type: ___________________________

4. 2BF$_3$ → B$_2$F$_6$
   Type: ___________________________

5. HNO$_3$ + Mn(OH)$_2$ → H$_2$O + Mn(NO$_3$)$_2$
   Type: ___________________________

6. AgNO$_3$ + BaSO$_4$ → Ba(NO$_3$)$_2$ + Ag$_2$SO$_4$
   Type: ___________________________

7. C$_3$H$_8$ + O$_2$ → CO$_2$ + H$_2$O
   Type: ___________________________

8. HF + CaSO$_4$ → H$_2$SO$_4$ + CaF$_2$
   Type: ___________________________

9. N$_2$O$_4$ → 2NO$_2$
   Type: ___________________________

10. H$_2$O + AgI → HI + AgOH
    Type: ___________________________

11. HNO$_3$ + Fe(OH)$_3$ → H$_2$O + Fe(NO$_3$)$_3$
    Type: ___________________________

12. CaCO$_3$ → CaO + CO$_2$
    Type: ___________________________

13. LiBr + Co(SO$_3$)$_2$ → Li$_2$SO$_4$ + CoBr$_4$
    Type: ___________________________

14. LiNO$_3$ + Ag → AgNO$_3$ + Li
    Type: ___________________________

15. H$_2$O$_2$ → H$_2$O + O$_2$
    Type: ___________________________

Chapter 9 Worksheet 1: Stoichiometry--Mole to Mole Problems

Hint: Use the mole ratio = \( \frac{\text{mole find}}{\text{mole given}} \)

1. How many moles of sodium hydroxide will react with 11 moles of magnesium sulfate?
   \[ \text{MgSO}_4 + 2\text{NaOH} \rightarrow \text{Na}_2\text{SO}_4 + \text{Mg(OH)}_2 \]

2. How many moles of magnesium hydroxide are required to react completely with 0.044 moles of hydrochloric acid, HCl. (magnesium hydroxide is the active agent in Milk of Magnesia)
   \[ \text{Mg(OH)}_2 + 2\text{HCl} \rightarrow \text{MgCl}_2 + 2\text{H}_2\text{O} \]

3. How many moles of water will be produced from burning 23.4 moles of ethane, C\(_2\)H\(_6\), with an excess of oxygen?
   \[ 2\text{C}_2\text{H}_6 + 7\text{O}_2 \rightarrow 4\text{CO}_2 + 6\text{H}_2\text{O} \]

4. How many moles of oxygen are required to react completely with 44 moles of ammonia?
   \[ 4\text{NH}_3 + 3\text{O}_2 \rightarrow 2\text{N}_2 + 6\text{H}_2\text{O} \]

5. 16 moles of phosphoric acid, H\(_3\)PO\(_4\), reacts with an excess of calcium hydroxide. How many mole of water are produced?
   \[ 2\text{H}_3\text{PO}_4 + 3\text{Ca(OH)}_2 \rightarrow \text{Ca}_3(\text{PO}_4)_2 + 6\text{H}_2\text{O} \]

Answers: 1: 22 mol NaOH, 2: 0.022 mol Mg(OH)_2, 3: 70.2 mol H_2O, 4: 33 mol O_2, 5: 48 mol H_2O
Ch 9 WS 2: Stoichiometry--Mole to grams, representative particles or gas volume

Hint: Use the mole ratio = \( \frac{mole\ find}{mole\ given} \)

1. How many liters of hydrogen gas will be produced from 5.0 moles of lithium reacting with an excess of water at STP?
   \[ 2\text{Li}(s) + 2\text{H}_2\text{O}(l) \rightarrow 2\text{LiOH(aq)} + \text{H}_2(g) \]

2. How many grams of sodium metal will be required to produce 0.34 moles of sodium oxide in the presence of excess oxygen?
   \[ 4\text{Na}(s) + \text{O}_2(g) \rightarrow 2\text{Na}_2\text{O}(s) \]

3. How many formula units of cesium nitride will be produced from 2.02 mole of cesium reacting with excess nitrogen?
   \[ 6\text{Cs}(s) + \text{N}_2(g) \rightarrow 2\text{Cs}_3\text{N}(s) \]

4. How many grams of carbon dioxide will be produced from 6.2 moles of benzene, \( \text{C}_6\text{H}_6 \), burning in the presence of excess oxygen?
   \[ 2\text{C}_6\text{H}_6(l) + 15\text{O}_2(g) \rightarrow 12\text{CO}_2(g) + 6\text{H}_2\text{O}(l) \]

5. How many atoms of sodium will be required to react completely with 0.041 moles of sodium nitrate to produce sodium oxide?
   \[ 10\text{Na} + 2\text{NaNO}_3 \rightarrow 6\text{Na}_2\text{O} + \text{N}_2 \]

6. How many liters of nitrogen will be produced from 21 moles of ammonia reacting with excess oxygen?
   \[ 4\text{NH}_3 + 3\text{O}_2 \rightarrow 2\text{N}_2 + 6\text{H}_2\text{O} \]

Answers: 1: 56 L \( \text{H}_2 \), 2: 16 g \( \text{Na} \), 3: \( 4.05 \times 10^{23} \) f.u.n.\( \text{Cs}_3\text{N} \), 4: 1600 g \( \text{CO}_2 \), 5: \( 1.2 \times 10^{23} \) at. \( \text{Na} \), 6: 240 L \( \text{N}_2 \)
1. How many moles of glucose can be “burned” biologically when 10.0 mole of oxygen is available? (Ans = 1.67 mol)

\[
C_6H_{12}O_6(s) + 6O_2(g) \rightarrow 6CO_2(g) + 6H_2O(l)
\]

2. How many grams of carbon dioxide would be produced if 45 grams of \( C_6H_{12}O_6 \) (glucose) completely reacted with excess oxygen? (Ans = 66 g)

\[
C_6H_{12}O_6(s) + 6O_2(g) \rightarrow 6CO_2(g) + 6H_2O(l)
\]

3. How many liters of ammonia gas, at STP, will react with 5.3 g \( O_2 \) to form nitrogen dioxide and water? (Ans = 2.1 L)

\[
4NH_3(g) + 7O_2(g) \rightarrow 4NO_2 + 6H_2O(l)
\]

4. How many molecules of carbon dioxide are produced from burning \( 2.3 \times 10^{-8} \) grams of pentanol, \( C_5H_{11}OH \)? (Ans = \( 7.9 \times 10^{14} \))

\[
2C_5H_{11}OH(l) + 15O_2(g) \rightarrow 10CO_2(g) + 12H_2O(g)
\]

5. How many liters of oxygen are needed to produce 231 liters of \( CO_2 \) at STP? (Ans = 347 L)

\[
2C_5H_{11}OH(l) + 15O_2(g) \rightarrow 10CO_2(g) + 12H_2O(g)
\]

6. How many grams of TNT are required to make 32,100 liters of carbon monoxide? (Ans = \( 9.3 \times 10^4 \) g)

\[
2C_7H_3N_2O_6 \text{(s)} \rightarrow 3N_2(g) + 7CO(g) + 5H_2O(g) + 7C(s) \text{ \text{soot}}
\]
An Explosive Material

2,4,6-trinitrotoluene is better known by its initials, TNT. It is an important explosive, since it can very quickly change from a solid into hot expanding gases. Two moles of solid TNT almost instantly changes to 15 moles of hot gases plus some powdered carbon, which gives a dark sooty appearance to the explosion.

TNT is explosive for two reasons. First, it contains the elements carbon, oxygen and nitrogen, which means that when the material burns it produces highly stable substances (CO, CO₂ and N₂) with strong bonds, so releasing a great deal of energy. This is a common feature of most explosives; they invariably consist of many nitrogen or oxygen containing groups (usually in the form of 2, 3 or more nitro-groups), attached to a small, constricted organic backbone.

\[
2\text{C}_7\text{H}_5\text{N}_2\text{O}_6 \ (s) \rightarrow 3\text{N}_2 (g) + 7\text{CO}(g) + 5\text{H}_2\text{O}(g) + 7\text{C}(s)
\]

However, explosives like TNT, actually have less potential energy than gasoline, but it is the high velocity at which this energy is released that produces the blast pressure. This very high speed reaction is called a detonation. TNT has a detonation velocity of 6,940 m/s compared to 1,680 m/s for the detonation of pentane in air, and the 0.34 m/s stoichiometric flame speed of gasoline combustion in air.

The second fact that makes TNT explosive is that it is chemically unstable - the nitro groups are so closely packed that they experience a great deal of strain and hindrance to movement from their neighbouring groups. Thus it doesn't take much of an initiating force to break some of the strained bonds, and the molecule then flies apart. Typically 1 gram of TNT produces about 1 litre of gas, which is a 1000 fold increase in volume. This expanding hot gas can be used to propel a projectile, such as a bullet from a gun, or for demolition purposes.

TNT as a Weapon

There are a number of advantages that TNT has for ammunition manufacturers. First, it melts at a reasonably low temperature (81°C), which means it can be readily melted and poured into shells and bombs. Secondly, it is not too unstable - allowing it to be handled reasonably safely during manufacture and operation. TNT will not spontaneously explode, and in fact can be treated quite roughly. In order to initiate the explosion, TNT must first be detonated using a pressure wave from another, more easily induced explosion from another explosive called a detonator. One such detonator is lead azide, Pb(N₃)₂, which explodes when struck or if an electric discharge is passed through it.

7. Use your answer from #6 on the reverse side to calculate the ratio of liters TNT to liters of product. Assume all solid products have a density of 1 gram/1mL
Ch 9 WS 4 More Mixed Stoichiometry Problems

1. How many grams of potassium chloride are produced if 25 grams of potassium chlorate decompose?
   \[ 2\text{KClO}_3 \rightarrow 2\text{KCl} + 3\text{O}_2 \]

2. What volume of \( \text{NH}_3 \) at STP is produced if 25 grams of nitrogen gas is reacted with excess hydrogen gas?
   \[ \text{N}_2 + 3\text{H}_2 \rightarrow 2\text{NH}_3 \]

3. How many grams of silver chloride are produced from 5.0 grams of silver nitrate reacting with an excess of barium chloride?
   \[ 2\text{AgNO}_3 + \text{BaCl}_2 \rightarrow 2\text{AgCl} + \text{Ba(NO}_3)_2 \]

4. What volume of hydrogen at STP is produced when 2.5 grams of zinc react with an excess of hydrochloric acid?
   \[ \text{Zn} + 2\text{HCl} \rightarrow \text{ZnCl}_2 + \text{H}_2 \]

5. If 10.0 gram of aluminum chloride are decomposed, how many molecules of \( \text{Cl}_2 \) are produced?
   \[ 2\text{AlCl}_3 \rightarrow 2\text{Al} + 3\text{Cl}_2 \]

6. How many moles of potassium nitrate are produced when two moles of potassium phosphate react with excess aluminum nitrate?
   \[ \text{K}_3\text{PO}_4 + \text{Al(NO}_3)_3 \rightarrow 3\text{KNO}_3 + \text{AlPO}_4 \]

Answers: 1:15 g, 2:40 L, 3:4.2 g, 4:0.86 L, 5:6.77 \times 10^{22} \text{ molec.} 6:6 \text{ moles}

Chapter 12 WS 1 Boyle’s Law Problems (Two Sides)

1. What is the equation for Boyle’s Law?

2. A gas cylinder contains 2.50 L of argon gas at 100. kPa. What is the new volume of the gas if the piston is depressed until the pressure reaches 200 kPa. The temperature is held constant at 300 K. \(\text{Ans} = 1.25 \text{ L}\)

3. According to Boyle’s Law, gas volume and pressure are inversely proportional. Fill in the table with the new volumes and pressures if \(P_1 = 0.50\) atmospheres and \(V_1 = 24\) Liters. Create a line graph of the data.

4. The pressure on 4.50 L of nitrogen gas changes from 105 kPa to 35 kPa. What will be the new volume of the nitrogen gas? \(\text{Ans} = 14 \text{ L}\)

5. A sample of nitrogen occupies a volume of 400. mL at 130 kPa. What volume will it occupy at 150kPa? \(\text{Ans} = 350 \text{ mL}\)
6. Oxygen gas is at a pressure of 4.0 atm when it occupies a volume of 5.5 liters. What will be the pressure when the gas expands to a volume of 9.0 liters? ( Ans = 2.4 atm) 

7. A sample of nitrogen occupies a volume of 125 L at 250 torr. What volume will it occupy at 500 torr? ( Ans = 62.5 L) 

8. Oxygen gas is at a pressure of 15 atm when it occupies a volume of 2.5 L. To what pressure should it be changed to in order to occupy a volume of 9.9 L? ( Ans = 3.8 atm) 

9. Freon-12 was once widely used in refrigeration systems, but has now been replaced by other compounds that do not lead to the breakdown of the protective ozone (O₃) in the upper atmosphere. Consider a 1.5 Liter sample of gaseous Freon-12 at 56 mmHg. If the pressure is changed to 150 mm of mmHg at a constant temperature, what will be the new volume of the gas? ( Ans = 0.56 L) 

10. Calculate the pressure in mmHg in a motorcycle engine at the end of the compression stroke. Assume that at the start of the stroke, the pressure of the mixture of gasoline and air in the cylinder is 745.8 mm Hg and the volume of each cylinder is 246.8 mL. Assume that the volume of the cylinder is 24.2 mL at the end of the compression stroke. ( Ans = 7610 mmHg) 

11. If the pressure exerted on a confined gas is halved, then the volume of the gas will _______________.
Chapter 12 WS 2 Charles Law Problems (Two Sides)

1. What is the equation for Charles’ Law?

2. A balloon has a volume of 10. Liters at 150 K. What is the balloon’s new volume if the temperature is increased to 300 K? Explain in terms of the gas molecules hitting the balloon walls why the volume changed. (Ans = 20. L)

3. According to Charles’ Law, gas volume and temperature are directly proportional. Fill in the table with the new volumes and temperatures if $T_1 = 50. \text{K}$ and $V_1 = 20 \text{Liters}$. Create a line graph of the data.

4. A 2.0 L sample of air is collected at $27^\circ\text{C}$ and then cooled to $-3^\circ\text{C}$. The pressure is held constant at 1.0 atmosphere. What is the volume of the air at $-3^\circ\text{C}$? (Ans = 1.8 L)

5. A balloon filled with helium has a volume of 100. Liters at $277^\circ\text{C}$. If the balloon’s volume changes to 20. Liters at constant pressure, what is the temperature of the gas in Kelvin? (Ans = 110 K)
6. Chlorine gas occupies a volume of 25 mL at 350 K. What volume in mL will it occupy at 690 K? (Ans = 49 mL)

7. A sample of neon gas at 45°C and a volume of 3.5 L is cooled to 15°C. What is the new volume? (Ans = 3.2 L)

8. Fluorine gas at 699 K occupies a volume of 455 mL. To what temperature should it be lowered to bring the volume to 255 mL? (Ans = 392 K)

9. Helium occupies a volume of 3.8 liters at –45°C. What volume will it occupy at 140°C? (Ans = 6.9 L)

10. If the temperature around a perfectly elastic balloon filled with helium rises from 100 K to 300 K then the balloon’s volume will decrease/increase by a factor of ________________. Assume pressure stays constant.
Chapter 12 WS 3 Gay Lussac’s Law Problems

1. What is the equation for Gay-Lussac’s Law?

2. A cylinder of nitrogen gas at 99 kPa and 280K is cooled to 90K. What is the new pressure inside the cylinder? (Ans = 32 kPa)

3. An aerosol can contains freon gas at a pressure of 15 atmospheres at 298 Kelvin. The aerosol can will burst if the pressure exceeds 30 atmospheres. At what temperature will the aerosol can burst? (Ans = 596 K)

4. A gas cylinder in a dentist’s office contains dinitrogen oxide gas at 5.0 atmospheres at 20°C. If the dentist office catches fire and the gas cylinder is surrounded by 1400°C flames, what will be the pressure inside the cylinder? (Ans = 29 atm)

5. A playground ball is filled to 760 mmHg with nitrogen at 17°C. What temperature in Kelvin is required to increase the pressure inside the ball to 1000 mmHg? (Ans = 382 K)

6. A rigid gas tire is pressurized to 1210 torr at 25°C. What will be the pressure in the tire if the temperature increases to 41°C? (Ans = 1270 torr)

7. If the temperature of a gas in a rigid cylinder is doubled, then the pressure ____________________ (be specific)
Chapter 12 WS 4 Mixed Gas Law Problems.

1) If the atmospheric pressure is measured as 78.0 kPa, what should the pressure be in mmHg on a barometer? (Ans = 585 mmHg)

2) A sample of nitrogen occupies a volume of 2.5 L at 100°C. What volume will it occupy at 50°C? (Ans = 2.9 L)

3) A sample of gas occupies 2.50 L at 1.15 atm of pressure. What is the volume at standard atmospheric pressure? (Ans = 2.88 L)

4) A gas at 40°C and 1.5 atmospheres is pressurized to 6.0 atmospheres. What is the new temperature of the gas in °C? (Ans = 1252K = 979°C)

5) A 500. ml sample of oxygen gas at 760 mmHg is compressed to 100. ml. What is the new pressure? (Ans = 3800 mm Hg)

6) Oxygen gas is at STP when it occupies a volume of 5.50 liters. To what temperature in Kelvins should it be raised to occupy a volume of 9.00 liters? (Ans = 447 K)

7) Hydrogen gas was cooled from 150°C to 80°C. Its new volume is 120 mL. What was the original volume? (Ans = 140 mL)
Chapter 12 WS 4 Continued

8) A space capsule pressurized with gas to 700 mmHg at 298K is cooled to 4.0 K in outer space. What is the new gas pressure inside the space capsule? (Ans = 9.4 mmHg)

9) Neon gas at 350°C occupies a volume of 200L. To what temperature in celsius should it be lowered to bring the volume to 85 L? (Ans = -8°C)

10) A sample of gas occupies 125 ml at STP. What is its pressure in kPa when its volume is compressed to 75.0 ml? (Ans = 169 kPa)

11) A propane gas tank pressurized to 2.0 atmospheres at 10°C is increased in temperature to 140°C. What is the new pressure in the tank? (Ans = 2.9 atm)

12) A sample of gas occupies 45.2 ml at 720. mmHg. What is its volume at standard atmospheric pressure? (Ans = 42.8 mL)
Chapter 5 Worksheet 3: Isotope/Scientist Review

Elements come in a variety of isotopes, meaning they are made up of atoms with the same atomic number (number of protons) but different atomic mass numbers. These atoms differ in the number of neutrons.

The average atomic mass is the weighted average of all the isotopes of an element.

Example: A sample of cesium is 75% Cs-133, 20% Cs-132, and 5% Cs-134. What is its average atomic mass?

\[
\begin{align*}
\text{Answer} & \quad 0.75 \times 133 = 99.75 \\
& \quad 0.20 \times 132 = 26.4 \\
& \quad 0.05 \times 134 = 6.7 \\
& \quad \text{Total} = 132.85 \text{ amu}
\end{align*}
\]

Fe-55 has _____ protons, _____ electrons and _____ neutrons.

Silver-109 has _____ protons _____ electrons and ______ neutrons.

\(^{40}\text{K}\) has _____ protons, _____ electrons and _____ neutrons.

Write the isotope symbol for the element that has 31 protons and 38 neutrons.__________

Lead-210 has _____ neutrons.

____________________________________________________________________________________

Which scientist determined the atom was mostly empty space?__________________

Which scientist discovered electrons using a cathode ray tube?__________________

Which scientist said that all atoms of an element are identical?_____________________

____________________________________________________________________________________

Determine the average atomic mass of the following mixtures of isotopes

1. 85% Iodine-127 15% Iodine-126 (Ans = 126.85 amu)

2. 25% \(^{37}\text{Cl}\), 75% \(^{35}\text{Cl}\) (Ans = 35.5 amu)

3. 15% Nickel-56, 80% Nickel-58, 5% Nickel-60 (Ans = 57.8 amu)
